

## 1986 E30 M3 Service Document Synopsis

We have gathered service documents dating from 5-27-1998 through to 4-1-22. These documents were included in the sale of the vehicle and travelled with the vehicle from Sweden to Colorado. We have since translated the major services as well as many minor services which are provided and to be used along with this document. We do not currently have any service records prior to 1998 and we are presuming that between the Vehicles initial sale and 1998 that this particular car was serviced at a BMW Dealership as this is extremely common, especially in Europe with their strict regulations on Vehicle Safety in order to keep registration on the roads.

There have been several larger services on the car, including something listed simply as “Race motor” – *we do know that this car is powered by a 2.5L S14, the engine will have started life as a 2.3L S14 that has been bored out, we know this as the head is stamped as an 87 and the EVO 3 (2.5L) motors were not made until 1989, This engine does have the correct bolt through the crank pulley assembly rather than the nut you would find on a 2.3L crankshaft assembly, this confirms that the engine did indeed start life as a 2.3L but is now, as advertised, a 2.5L S14* – many of the documents do not translate completely accurately and as such may have vague or difficult to decipher descriptions for the service. Where applicable we have detailed the Owner of the Vehicle, the mileage at time of service as well as the date, location and the invoice total.

In summary, we have over \$32,000 worth of service records, explaining this Vehicles impeccable presentation, it shows clearly that previous owners have cared for this car in a way that most don't care for their first-born child. The most major services can be found on the following dates:

04/01/2021  
04/22/2021  
05/08/2013  
08/12/2013  
06/25/2013  
06/10/2005  
06/30/1999  
08/12/1998

This is far from an extensive list of services performed; however, we believe this to be much of the relevant servicing that any collector would want to see in an investment grade vehicle such as this M3. It is clear throughout the service records that previous owners have not been afraid to spend money where it is needed, both in preventative maintenance as well as servicing of parts and systems that keep the driving experience as good (or better) than factory. We particularly enjoyed seeing that bushings/steering components & suspension components have been serviced regularly throughout this car's history.
